EDUCATION

Master of Science in Computer Science - Arizona State University, Tempe, Arizona (GPA: 4.0) May 2026

- *Relevant coursework:* Cloud Computing, Data Processing at Scale, Semantic Web Mining, Advanced Algorithms

Bachelor of Technology in Computer Science Engineering - SRM Institute of Science and Technology, India (GPA: 3.5) May 2021

TECHNICAL SKILLS

Programming Languages: Java, Python, Go, C/C++, JavaScript, Kotlin, Bash

Cloud & DevOps: AWS, Azure, GitHub Actions, Terraform, Kubernetes, Jenkins, Ansible, Docker, Git

Web & Databases: React.js, Redux, Node.js, FastAPI, HTML/CSS, Tailwind CSS, MySQL, PostgreSQL, MongoDB

AI Tools and Frameworks: PyTorch, Hugging Face, LangChain, LlamaIndex, LangGraph, Azure OpenAI, Pinecone, MLflow, Cursor

Certifications: HashiCorp Certified: Terraform Associate (002), Microsoft Certified: Azure Fundamentals (AZ-900), Azure

Administrator Associate (AZ-104), Azure Developer Associate (AZ-204), DevOps Engineer Expert (AZ-400)

EXPERIENCE

Software Engineer 2, Capgemini, Pune, India

July 2022 - July 2024

- Developed a one-click solution using ServiceNow, Python, Terraform, and Azure DevOps to automate cloud resource provisioning, decreasing deployment time by 50%.
- Led a team of two developers for a Terraform code remediation project, designed solutions, planned sprints, and reviewed and closed backlogs following project timeline.
- Automated 100 EC2 spin-ups/turn-offs utilizing AWS Lambda, slashing monthly costs by approximately 40%.
- Deployed Bitbucket Datacenter on AWS leveraging a Blue-Green approach, ensuring 99.99% availability, with AWS CloudFormation, Docker, RDS, and EKS (Kubernetes).
- Recognized with Capgemini Propeller Award twice (2021, 2022) for outstanding efforts in upskilling multiple teams in DevOps practices and tools.

Software Engineer, Capgemini, Pune, India

June 2021 - July 2022

- Designed Azure and AWS Terraform modules to streamline cloud infrastructure setup, accelerating DevOps adoption across organization and cutting time of fresh provisioning by 30%.
- Implemented AWS Lambda to create a ServiceNow incident whenever websites went down, alerting the Ops team to take quick action and reducing website downtime by 25%.
- Established approval gates and policies in 20+ Azure DevOps repositories, enhancing code quality and diminishing errors.
- Documented code design changes, drafted 10+ SOPs, and provided 15+ knowledge transfers (KTs) to operations teams, improving adoption of DevOps practices and infrastructure as code across organization.

Software Engineer Intern, Capgemini, Remote

January 2021 - June 2021

- Performed Exploratory Data Analysis (EDA) using Python, Pandas, and NumPy on a countrywide traffic accident dataset covering 49 U.S. states to identify statistical anomalies.
 - Leveraged Azure Blob Storage for data management and executed ETL operations using Azure Data Factory and Databricks.
 - Unveiled trends such as monthly accident-prone cities, state-wise statistics, and severity ratios based on weather.
 - Visualized findings through interactive dashboards, contributing to informed decisions in road safety.
-

PROJECTS

FairShare [[Website](#)]

- Engineered a full-stack Smart Bill Splitter using FastAPI and React (Vite + TypeScript), implementing a weighted share allocation algorithm that pro-rates tax and fees proportionally per user, replacing equal-split assumptions with item-level cost attribution.
 - Integrated AWS Textract (Boto3) to automate receipt parsing by uploading images to S3 and invoking the analyze_expense API, extracting structured line items and tax fields from unstructured receipt photos to eliminate manual data entry.
 - Designed a PostgreSQL backed debt simplification engine using SQLAlchemy and a net-settlement algorithm that aggregates pairwise balances across all group bills. Caching results in a Debts table for O(1) dashboard reads with Firebase Admin SDK securing all endpoints via JWT token validation.
-

LEADERSHIP EXPERIENCE

Senior Tutoring Shift Lead, ASU Engineering, Tempe, Arizona, USA

Feb 2025 - Present

- Awarded the **2026 Best Student Leader Award** and nominated for national recognition (NSEA) for successfully scaling tutoring operations and managing a diverse staff of 100 employees.
- Led the incorporation of AI for tutoring and utilized agentic coding to architect and deploy engaging, collaborative gaming and educational websites, enhancing digital interaction for the engineering student body.
- Designed comprehensive training modules and managed administrative functions, including scheduling and payroll for all staff, while upholding program integrity and academic standards to ensure a high-quality learning environment.
